Problem Solving

QUESTION DESCRIPTION

The median of a list of numbers is essentially its middle element after sorting. The same number of elements occur after it as before. Given a list of numbers with an odd number of elements, find the **median**?

**Example**  
 $arr = [5, 3, 1, 2, 4]$

The sorted array  $arr' = [1, 2, 3, 4, 5]$ . The middle element and the median is **3**.

**Function Description**

Complete the `findMedian` function in the editor below.

`findMedian` has the following parameter(s):

- `int arr[n]`: an unsorted array of integers

#### Returns

- `int`: the median of the array

#### Input Format

The first line contains the integer  $n$ , the size of `arr`.

The second line contains  $n$  space-separated integers `arr[i]`

#### Constraints

- $1 \leq n \leq 1000001$
- $n$  is odd
- $-10000 \leq arr[i] \leq 10000$

#### Sample Input 0

```
7
0 1 2 4 6 5 3
```

#### Sample Output 0

```
3
```

#### Explanation 0

The sorted `arr` = `[0, 1, 2, 3, 4, 5, 6]`. It's middle element is at `arr[3] = 3`.

### CANDIDATE ANSWER

Language used: **Python 3**

```
1 #
2 # Complete the 'findMedian' function below.
3 #
4 # The function is expected to return an INTEGER.
5 # The function accepts INTEGER_ARRAY arr as parameter.
6 #
7
8 def findMedian(arr):
9     arr.sort()
10    if len(arr)%2==0:
11        left_mp = int((len(arr)/2))
12        right_mp = int((len(arr)/2))+1
13        # midpoint = arr[left_mp]
14        midpoint = (arr[left_mp]+arr[right_mp])/2
15        return midpoint
16    else:
17        right_mp = int((len(arr)/2)-0.5)
18        midpoint = arr[right_mp]
19        return midpoint
20    # return arr
21
22
23
```
